EFOMP-ESTRO-IAEA publication "Quality control in cone beam computed tomography"

EFOMP has just uploaded on its brand new website www.efomp.org[1] an important document entitled "Quality control in cone beam computed tomography". This book is the second of the series on quality control protocols. EFOMP published the first document on "Quality Controls in digital mammography" in 2015. These books are freely available and can be used as both, in-depth working guides to everyday practice and an up-to-date reference sources for medical physicists engaged in quality control of medical imaging systems. An executive summary of the CBCT protocol has been published in EFOMP official journal, Physica Medica (EJMP) (open access) and a corresponding link has been added in the efomp web page for the CBCT protocol.
